THE PROJECT:
We have two goals; reduce food waste on campus, and connect students to
sources of free food as it becomes available, immediately.
We want to create an app, that can give this information in real time,
which is student powered and doesn't rely on moderators
or staff members for updates.

HSU has a problem: 30% of waste generated is food. Here's the thing:
when we cater events HSU dining must contact the Oh Snap program
when the event is complete. A clock starts. Oh Snap has a window to
pick up food -- one of their employees must go to this location and
follow strict guidelines for food storage, taking this food to the oh
Snap office. Then that food is given out to students.
What isn't eaten must be composted by our ecology and reclaimation
department.

We want to make an app which pushes food info out to students in real
time, and short circuit this entire process.
Anyone can push the info, you get this information with a physical
location, and a timer.

THE CLIENT:
HSU - Oh Snap Program -- Ravin Craig
rdc23@humboldt.edu
//

FIRST MEETING:
We met Ravin on 9.13.17 and discussed our project for an hour.
She was very interested and agreed to be our client--should our bid be
accepted.
